Channel-Breakers Portfolio

We have created a Portfolio of stocks by utilizing the “Weekly” Early Warnings segment from TheUpTrend.com technical charting system (link below).

NOTE: *The Channel-Breakers Portfolio has an intermediate-term perspective. Since this stock portfolio is based on weekly stock charts, we will be updating this report only once a week, on the week-end. Any decisions made on the week-end will be reflected in a Buy, Sell, or Short transaction effected at Monday’s Opening Price.*

COMMENT: *Cameco Corporation issued a profit warning before the market opened today, so with the stock down significantly in the pre-market, we took the decision to sell. That is in line with our Modus Operandi (which see below) that calls for a stock to be sold if it declines by 7% or more. Still, even after the big drop at the opening, the stock recorded a total gain of 30.3%. Not too shabby. At this point, we are concerned that there could be a near-term pull-back in the market as investors adjust to the new incoming president and what immediate policies his administration may implement or try to implement. Thus, we are not going to add a new position or positions at this time. AltaGas is up a little bit after its decline to reflect a proposed acquisition. Husky Energy is disappointing. Magna International has given back most of its gains. CGI Group continues “under water”. Still, thanks to Cameco, the portfolio is still up: by 2.1%.*

Below, we set out our guidelines (Modus Operandi) for administering the Portfolio.

MODUS OPERANDI

The composition of the Channel-Breakers Portfolio is based on theUpTrend.com Weekly charts. We focus on the “Early Warnings” segment of the Weekly Trend Report from the website.

The Weekly charts are intermediate-term in nature, meaning the stocks are held not for trading purposes but for the more likelihood of achieving longer-term capital gains.

Using the weekly charts, we evaluate those stocks that have moved above or below their respective channel-lines.

We started with \$100,000 cash and, when appropriate, we choose either one or two stocks and put an arbitrary approximate \$10,000 in each stock pick. The buy price or the short-sell price will be at Monday’s opening price. All short sells will require the mandatory 30% margin.

We will continue buying or shorting until the Portfolio is fully “invested”, although this could include a sizable cash position. The portfolio is monitored daily and reported on weekly.

If a stock closes at or higher than its Second Target price at the end of a week then, automatically, 1/2 of the position will be sold at Monday's opening price. Using TheUpTrend.com system, the stock will be further evaluated and, if there is possible further upside, then it will be retained. If not, the entire position will be sold at Monday's opening. There could be exceptions.

Also, if a stock receives a change of opinion in TheUpTrend.com by breaking below the lower channel-line at the end of a week, then it will be sold at Monday's opening price.

Similarly, for a stock sold short, if the stock rises above the upper channel-line at the end of a week, then that stock will be bought back at Monday's opening price, and the 30% margin requirement will be deleted.

If, during the week, the stock plunges dramatically such that it closes 7% or more below its purchase price, then that stock will be sold at the next day's opening price.

Similarly, if a stock sold short rises dramatically at any time during the week such that it closes 5% or more above its contract price, then that stock will be sold at the next day's opening price.

Stocks sold either will be replaced, or the sales proceeds will augment the cash portion.
