

TECHNICAL CHARTING OPINION

eResearch Corporation is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website www.kimblechartingsolutions.com, that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

Gold Could Blast Off If King Dollar Turns Weak Here!

Gold Could Blast Off If King Dollar Turns Weak Here!

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

The past six years have not been fun for buy & hold investors in the Gold, Silver, and Miners space!

Could that trend be about to change? The Power of the Pattern would say, a price point is in play, where a trend reversal could start to take place.

The chart below looks at the US Dollar/Gold ratio over the past 30-years.

As shown in the chart above (to enlarge, place cursor on the chart and then <Ctrl-Click>), from 2001 to 2011, the ratio fell, reflecting that Gold was stronger than the US\$.

From 2011 the ratio has risen sharply, reflecting that the US\$ has been much stronger than Gold at (1).

The ratio remains in a long-term down-trend but a 6-year rising trend. A potential “resistance cluster” is in play at (2) above.

If the resistance holds at (2) and the ratio turns lower, Gold, Silver, and the Miners would benefit.

The Power of the Pattern would share that this is one of the most important potential inflection points for Gold/US\$ in years and years.

Full Disclosure: [Premium](#) and [Metals](#) Members have been long Junior Miners (GDJ) for the past couple of weeks.

We shared a week ago that mining stocks could be poised to [out-perform the S&P 500 for years to come.](#)

***e*Research Corporation**

***e*Research** was established in 2000 as Canada's first equity issuer-sponsored research organization. As a primary source for professional investment research, our Subscribers (*subscription is free!!!*) benefit by having written research on a variety of small- and mid-cap, under-covered companies. We also provide unsponsored research reports on middle and larger-sized companies, using a combination of fundamental and technical analysis. We complement our corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. We provide our professional investment research and analysis directly to our extensive subscriber network of discerning investors, and electronically through our website: www.eResearch.ca.
