

## TECHNICAL CHARTING OPINION

**eResearch Corporation** is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website [www.kimblechartingsolutions.com](http://www.kimblechartingsolutions.com), that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

### **Gold Miners And Metals Have Been The Place To Be**

## Gold Miners And Metals Have Been The Place To Be

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

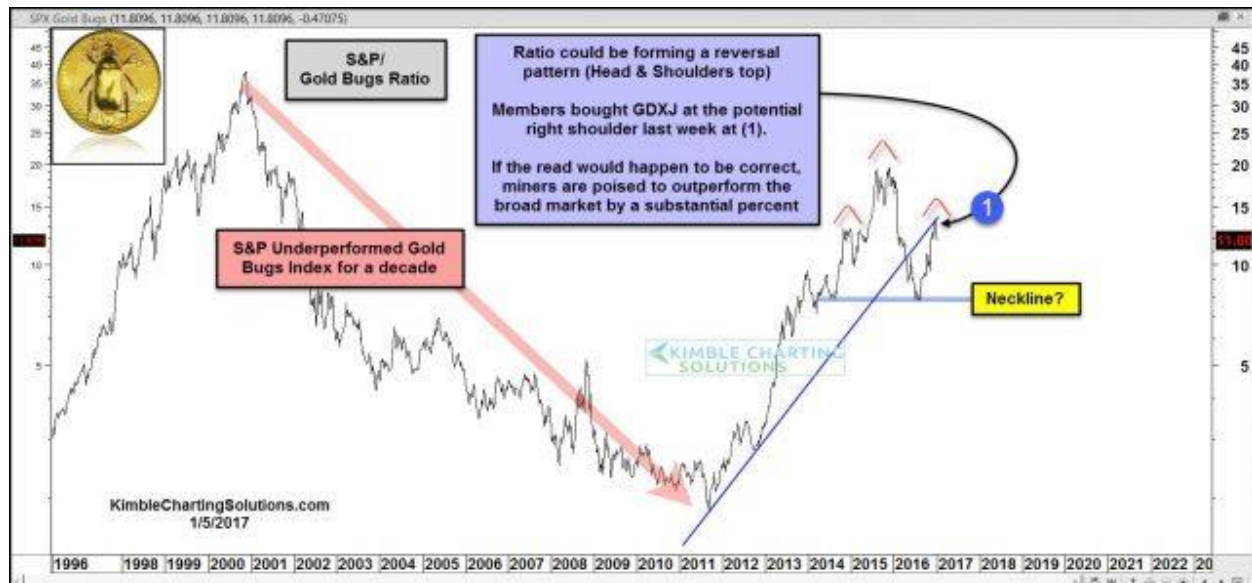

Christmas is now nearly one month ago; how time flies. Ole Santa has been taking a rest and, so far, over the past month, the S&P 500 has done the same. Not so much for a few other high-flying assets!

The Metals Sector has done pretty well since Christmas, with Gold and Silver gaining around 7% more than the S&P, and Miners outpacing by a much larger margin.

We shared the chart below of the S&P 500 Gold bugs index at the start of this year, see post [HERE](#)

The following chart looks at the S&P 500/Gold Bugs Ratio over the past 20-years.

The Power of the Pattern has been highlighting this pattern to members, suggesting this could be a long-term topping pattern (potential Head & Shoulders pattern). If this read would happen to be correct (not proven so far), the pattern created by billions of free-thinking people, would suggest that the [Miners could out perform the broad market for a good while](#). If the ratio is correct, it is suggesting a pair trade of long miners/short S&P.

## **eResearch Corporation**

**eResearch** was established in 2000 as Canada's first equity issuer-sponsored research organization. As a primary source for professional investment research, our Subscribers (*subscription is free!!!*) benefit by having written research on a variety of small- and mid-cap, under-covered companies. We also provide unsponsored research reports on middle and larger-sized companies, using a combination of fundamental and technical analysis. We complement our corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. We provide our professional investment research and analysis directly to our extensive subscriber network of discerning investors, and electronically through our website: [www.eResearch.ca](http://www.eResearch.ca).
