

TECHNICAL CHARTING OPINION

eResearch Corporation is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website www.kimblechartingsolutions.com, that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

Bullish Gold Bugs Break-Out

Bullish Gold Bugs Break-Out

(To enlarge the charts below, place cursor on chart, and <Ctrl-Click>)

Since the first day after Christmas last year (12/27/16), the metals space has been a great place to be.

The chart below looks at the performance of several metals assets compared to the S&P 500 since this date.

[Premium](#) and [Metals](#) members went long this sector by purchasing GDXJ on 12/27/16, due to an **upside breakout**.

Even though the S&P is getting a ton of press about doing well and near all-time highs, its performance since 12/27/16 (up 3.8%), is lagging the metals space by a large percentage!

The next chart looks at the Gold Bugs/S&P 500 Ratio:

An upside breakout above the pennant pattern resistance at (3), if it occurs, would suggest that continued out-performance by Gold Miners is in play. This should attract buying pressure to mining companies.

Full disclosure; Premium and Metals members own miners at this time.

***e*Research Corporation**

***e*Research** was established in 2000 as Canada's first equity issuer-sponsored research organization. As a primary source for professional investment research, our Subscribers (*subscription is free!!!*) benefit by having written research on a variety of small- and mid-cap, under-covered companies. We also provide unsponsored research reports on middle and larger-sized companies, using a combination of fundamental and technical analysis. We complement our corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. We provide our professional investment research and analysis directly to our extensive subscriber network of discerning investors, and electronically through our website: www.eResearch.ca.
