

## TECHNICAL CHARTING OPINION

**eResearch Corporation** is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website [www.kimblechartingsolutions.com](http://www.kimblechartingsolutions.com), that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:  
**Seasonal Low In Stocks Due Today, Different This Time?**

## Seasonal Low In Stocks Due Today, Different This Time?

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

The chart below looks at the average performance of the S&P 500 in the month of October, over the past 10 & 20 years. Both charts have a couple of things in common.

<CTRL-CLICK> ON CHART TO ENLARGE

---

The first thing that each chart has in common is that both charts reflect gains in the month of October, with the average gain over the past 10 years being +0.82%.

The other thing that both charts have in common is that the seasonal low over the past 10 & 20 years took place **around the 9th of October, which was yesterday**. The average gain in both charts from the 9th through the end of the month is around 1% larger than the average October gain.

Each month we share with [Premium](#) and [Sector](#) members, the 20 S&P 500 stocks that have done the best in each month, over the past 10 years. This month (October) reflects that the top 20 stocks average much greater gains than the overall markets! If you would like to take advantage of the October seasonal pattern and the 20 stocks that do well in October, we would be honored by your membership.
