

## TECHNICAL CHARTING OPINION

**eResearch Corporation** is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website [www.kimblechartingsolutions.com](http://www.kimblechartingsolutions.com), that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

### **A Look at Copper**

## A Look at Copper

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

Copper has done well over the past two years, as it is up over 50%.

However, since 2011, the total returns for Copper are not so bullish. The rally in Copper over the past 24 months has caused a majority of investors to become bullish (highest percentage of bulls in 6 years).

The chart below looks at sentiment for Copper from [Sentimentrader.com](http://Sentimentrader.com)

<CTRL-CLICK> ON CHART TO ENLARGE

<continued>

Bullish sentiment towards Copper is now near 80%. The last time this percentage of investors were that bullish Copper was near the highs back in 2011.

The next chart below looks at an update of the pattern for Copper:

**<CTRL-CLICK> ON CHART TO ENLARGE**

No doubt the trend in Copper over the past two years remains higher. With bullish sentiment towards Copper at the highest levels in 6 years, Copper bulls would NOT want to see selling pressure/reversal patterns take place at (1).

## ***e*Research Corporation**

**eResearch** was established in 2000 as Canada's first equity issuer-sponsored research organization. As a primary source for professional investment research, our Subscribers (*subscription is free!!!*) benefit by having written research on a variety of small- and mid-cap, under-covered companies. We also provide unsponsored research reports on middle and larger-sized companies, using a combination of fundamental and technical analysis. We complement our corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. We provide our professional investment research and analysis directly to our extensive subscriber network of discerning investors, and electronically through our website: [www.eResearch.ca](http://www.eResearch.ca).
