

## Weekly Market Review

**eResearch Corporation** is pleased to provide a commentary courtesy of Urban Carmel of **The Fat Pitch**.

Detailed information on **The Fat Pitch** is provided at the end of the article. However, a brief overview is provided immediately below, with the article beginning on the next page.

### WHAT IS THE FAT PITCH?

Specifically, the Fat Pitch on this site refers to two situations.

First: A Fat Pitch comes at a market turning point.

Second: The Fat Pitch is a favorable investing environment.

#### Objectives

The objective of The Fat Pitch is to provide a structured, quantitative, and empirical methodology for evaluating the state of the market. At any point in time, there are a variety of factors pulling on the market. We want to determine the relative importance of each factor in order to answer two questions:

- (1) In which direction should we be investing in the market?
- (2) Are tailwinds behind this direction or are headwinds picking up?

---

**eResearch** was established in 2000 as Canada's first equity issuer-sponsored research organization. As a primary source for professional investment research, our Subscribers (*subscription is free!!!*) benefit by having written research on a variety of small- and mid-cap, under-covered companies. We also provide unsponsored research reports on middle and larger-sized companies, using a combination of fundamental and technical analysis. We complement our corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. We provide our professional investment research and analysis directly to our extensive subscriber network of discerning investors, and electronically through our website: [www.eResearch.ca](http://www.eResearch.ca).

Bob Weir, CFA  
Director of Research

## Weekly Market Summary

Summary: U.S. equities have already gained more in the first few weeks of January than they do in many full years. The recent trend is being termed unprecedented, but these types of gains have happened before. The current trend is also being called unsustainable, but in most prior cases, equities have continued higher. The equity market is undeniably hot, and that can often lead to a period of retracement and decline, but trends weaken before they reverse, and this one has not shown any sign of weakness. The longer-term outlook remains favorable.

\* \* \*

All of the U.S. indices made new all-time highs (ATHs) again this week. This includes the very broad NYSE (composed of 2800 stocks) as well as the small cap index, RUT. The dominant trend remains higher.

U.S. markets have started the year like a rocket. SPX and DJIA are up 7.5% and NDX is up 9.7% YTD (from Alpha-trends).

## WHAT IS THE FAT PITCH?

In baseball, a fat pitch is a hittable ball. The odds are in your favor. You might miss, but it is a situation where you should take a swing of the bat. If you swing at good pitches and avoid the crappy ones, you improve your OBP. Once on base, it becomes a running game.

The stock market serves a lot of curve balls. Now and then there comes a Fat Pitch, your odds-on opportunity to swing the bat. So, get on base and then manage your base-runners.

Specifically, the Fat Pitch on this site refers to two situations.

**First: A Fat Pitch comes at a market turning point.** It is an identifiable and quantifiable capitulation point where sellers or buyers have become exhausted and panic or euphoria is at an extreme. The Fat Pitch here is measured by a combination of (in no particular order): put-call, Trin, NYMO, sentiment, fund cash balances, major accumulation or distribution, volume, price relative to Bollinger bands, volatility, and consecutive days in a row in one direction. Swinging the bat without popping up is the hardest part.

**Second: The Fat Pitch is a favorable investing environment.** Old hands talk about there being only a few good times each year to be involved in the market. The remainder are unprofitable. I think this is correct. The Weekly Market Summary is intended to help discern when it is favorable to be long (or short) and when it is best to work on improving your French.

Every day, week, and year is a learning experience. The purpose of this site is to help refine what constitutes a Fat Pitch. Like baseball, you have to continue to work on your swing.

## Our Objectives

The objective of the Fat Pitch is to provide a structured, quantitative, and empirical methodology for evaluating the state of the market. At any point in time, there are a variety of factors pulling on the market. We want to determine the relative importance of each factor in order to answer two questions:

1. In which direction should we be investing in the market?
2. Are tailwinds behind this direction or are headwinds picking up?

Every Friday we publish a Weekly Market Summary with green, yellow, and red lights on it. Green is good and red is bad. Everything on this site is in support of this market summary.

The little tabs across the top of the site (trend, breadth, etc.) mirror the different factors we follow to monitor the market. There is nothing here that does not fit with the methodology.

Anytime you want to understand why a factor is red or green, click on the tab and read the accompanying analyses. To the fullest extent possible, we quantify and use empirics to determine the state of every factor.
