

TECHNICAL CHARTING OPINION

eResearch Corporation is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website www.kimblechartingsolutions.com, that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

Multi-Decade Break-Out Test For Commodities

Multi-Decade Break-Out Test For Commodities

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

The chart below highlights that the [Thomson Reuters Equal Weighted Commodity Index](#) has spent the majority of the past 20 years inside of a rising channel (1), reflecting that its long-term trend is up:

CLICK ON CHART TO ENLARGE ABOVE

Over the past 7 years, this index has struggled big time after hitting the top of this channel in the spring of 2011, creating a falling channel (2).

Since topping in 2011, the index has lost nearly 50% of its value. The decline saw it hit the bottom of this multi-decade rising channel back in 2016 and, since then, it has created a series of higher lows.

The index now faces a key breakout/breakdown test that could be important for commodities for years to come!

NOTE:

This coming Wednesday (February 21) we will be conducting a **private briefing for our blog viewers** and this chart will be one of many that we will discuss. We will highlight its importance, the impact on other markets and how to play it. If you would like to attend our FREE webinar....
