

## TECHNICAL CHARTING OPINION

**eResearch Corporation** is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website [www.kimblechartingsolutions.com](http://www.kimblechartingsolutions.com), that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:  
**Is The U.S. Dollar/Crude Oil Spread About To Narrow?**

## Is The U.S. Dollar/Crude Oil Spread About To Narrow?

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

The U.S. Dollar & Crude Oil sometimes dance to the same tune (correlate) and sometimes they head in opposite directions (non-correlate).

The chart below looks at the correlation between the two over the past couple of years.

**CLICK ON CHART TO ENLARGE ABOVE**

From September of 2016 until November of 2017, they tended to move in unison. Since November of 2017, they have been pretty much moving in opposite directions, creating one of the larger “Fish Mouth” spreads between the two in a couple of years.

If Crude Oil breaks support and the US\$ happens to break overhead resistance, these two could continue to non-correlate and the spread could narrow. If they narrow, this could have an important impact on numerous assets!

<continued>

**NOTE:**

This coming Wednesday (February 21) we will be conducting a **private briefing for our blog viewers** and this chart will be one of many that we will discuss. We will highlight its importance, the impact on other markets and how to play it. If you would like to attend our FREE webinar....
