

## TECHNICAL CHARTING OPINION

**eResearch Corporation** is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website [www.kimblechartingsolutions.com](http://www.kimblechartingsolutions.com), that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:  
**Is Silver Forming A Bullish Cup-and-Handle Pattern?**

## Is Silver Forming A Bullish Cup-and-Handle Pattern?

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

Silver, Gold and the Commodities Index (below) have struggled to move higher since they peaked in 2011. Could Silver be about to end its 7-year bear market? Are commodities about to enter into a long-term upward cycle?

The chart below looks at Silver over the past 40 years. It is possible that it is forming a bullish multi-decade “Cup & Handle” pattern.

<CTRL-CLICK> ON CHART TO ENLARGE

Silver currently remains inside of a 7-year falling channel, which could be the handle of the long-term bullish pattern. If Silver breaks out at (1), it would send a bullish price message and should attract buyers.

The top of the handle pattern comes into play as resistance right now so this is a very important test for Silver! Big test friends to see if its **“Hi-Yo Silver”** time!

Are commodities in general about to blast off higher? Below looks at the TR commodity index over the past 40 years:

**<CTRL-CLICK> ON CHART TO ENLARGE**

The TR Commodities index above seems to be influenced by a 16-year cycle. As the cycle could be ready to start another upward trend, the index finds itself testing the top of a 7-year falling channel, similar to Silver. If the index breaks out above resistance at (1), it would send a bullish price message to this hard-hit sector, which should attract buyers.

The two charts shared today highlight that Silver and the Commodities index are both up against the top of 7-year falling channel resistance at the same time. If they both break out at the same time, it would send bullish price messages that have been missing for years.

## ***e*Research Corporation**

***e*Research** was established in 2000 as Canada's first equity issuer-sponsored research organization. As a primary source for professional investment research, our Subscribers (*subscription is free!!!*) benefit by having written research on a variety of small- and mid-cap, under-covered companies. We also provide unsponsored research reports on middle and larger-sized companies, using a combination of fundamental and technical analysis. We complement our corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. We provide our professional investment research and analysis directly to our extensive subscriber network of discerning investors, and electronically through our website: [www.eResearch.ca](http://www.eResearch.ca).
