

TECHNICAL CHARTING OPINION

eResearch Corporation is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website www.kimblechartingsolutions.com, that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

NDX 100 & Semiconductors- Both Testing Breakout Levels

NDX 100 & Semiconductors- Both Testing Breakout Levels

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

Since the lows in 2009, the [NDX 100](#) and [Semiconductors \(SMH\)](#) has been much stronger than the S&P 500 (Upside Leaders).

In the chart below, the NDX 100 (left side) and Semiconductors (right side) are very near 2018 highs, which happen to be all-time highs as well.

If both would break out at each (1), they would send a bullish message to tech and the broad markets as well.

Keep a close eye on both, as break-outs would send a quality bullish message from leadership.
