

## TECHNICAL CHARTING OPINION

**eResearch Corporation** is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website [www.kimblechartingsolutions.com](http://www.kimblechartingsolutions.com), that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:

### **Copper Breaking Out After Large Decline**

## Copper Breaking Out After Large Decline

(To enlarge the charts below, place cursor on chart, and <Ctrl-Click>)

The chart below looks at the price of copper since 2011.

<CTRL-CLICK> ON CHART TO ENLARGE

Over the past few months, copper has been hit hard, as sellers drove it down nearly 25%.

This decline brought it to the price point (2), where four different support lines came into play, which looks like a support cluster. As the decline was taking place, momentum was hitting oversold levels.

This week copper is experiencing its strongest rally this year, as it breaks above steep falling resistance.

Should copper continue to push higher, it is possible that it is sending a positive to some hard-hit global sectors.
