

TECHNICAL CHARTING OPINION

eResearch Corporation is pleased to feature a technical opinion by Chris Kimble of Kimble Charting Solutions.

Mr. Kimble states, on his website www.kimblechartingsolutions.com, that his goal for his investment research is to:

... help people to enlarge portfolios regardless of market direction by looking for patterns at extreme points of "exhaustion" with a high probability of reversing, called TBNM: tops, bottoms, no middles. The intent is to simplify the decision-making process.

Mr. Kimble has been in financial services for over 30 years.

His research is intended to simplify investment decisions and increase confidence with charts that are clear as to the pattern at hand and action to take. His strategy is to look for chart patterns at extreme exhaustion points that have a high probability of reversing. These extremes reflect excess fear and greed of global investors and, therefore, they can be capitalized upon.

By providing research showing markets at extremes of long term resistance or support, and including bullish/bearish sentiment readings when available, Mr. Kimble attempts to help investors simplify their decision-making, reduce risk, increase confidence, and improve results.

Today's article begins on the following page, and is entitled:
Heads Up, Historical Support Test For Interest Rates!!!

Heads Up, Historical Support Test For Interest Rates!!!

(To enlarge the chart below, place cursor on chart, and <Ctrl-Click>)

This 4-pack looks at short to long-term interest rates over the past few decades with a little twist, because each chart is inverted (yields are upside down).

Each chart reflects that yields are testing *multi-decade support at each (1)*.

<CTRL-CLICK> ON CHART TO ENLARGE

These support lines were tested back in 2000 & 2007, where lows took place, which ended up being historical price points for bonds and stocks!

How will stocks react if support holds? How will stocks react if multi-decade support is broken to the downside?

What yields do at these multi-decade support points could be another historical inflection point for bonds and stocks!!!
